SUMMARY

- MCA student with a completed BBA in Computer Application and hands-on academic experience in web development using HTML, CSS, JavaScript, PHP, Python, and MySQL. Built functional web applications through project work, including a full-stack Book Recommendation System using Flask and MySQL. Comfortable working with both frontend and backend technologies. Passionate about creating clean, user-friendly web applications and eager to grow as a Python and Web Developer in the IT industry.

CORE SKILLS

- Web Development: HTML, CSS, JavaScript
- Backend Development: Python (Flask), PHP
- Database Management: MySQL, MongoDB
- Tools & Productivity: MS Office (Word, PowerPoint), Windows OS
- Fundamentals: Data Structures, Database Management Systems
- Growing Skills: MongoDB, advanced Python, PHP

EDUCATION

Master of Computer Application (MCA) Pursuing
Pune University

Sep 2025 - May 2027

Bachelor of Business Administration in Computer Application — BBA
Pune University

Aug 2023 - Jun 2025

PROJECT HIGHLIGHTS

Campus Item Finder - College Lost and Found System

- Developed a web-based application that enables students to report, search, and claim lost and found items within the college campus.
- Implemented secure user authentication, item posting, search functionality, and admin approval features using Python (Flask) and React.js.
- Managed user and item data using MongoDB and built REST APIs to ensure efficient data storage, retrieval, and communication.

Frontend: React.js, Bootstrap, CSS | Backend: Python (Flask) | Database: MongoDB

Book Recommendation System

- Created a web application that suggests books to users based on their interests, genre preferences, and past choices
- Built the recommendation logic using Python and designed a simple, easy-to-use interface for browsing and discovering books
- Managed all book and user data using MySQL for quick and reliable retrieval

Frontend: HTML, CSS, JavaScript | Backend: Python (Flask) | Database: MySQL

Online Cake Order System

- Developed an online ordering platform where customers can browse cakes by category, customize flavors, frosting, and decorations, and place orders anytime
- Built features for delivery scheduling, photo/message uploads, and online payment to make the whole process smooth and convenient

Frontend: HTML, CSS | Backend: PHP | Database: MySQL
